

Arkansas Next Generation 911 GIS Minimum Upload Schedule

This guideline applies to address points, road centerlines, emergency service boundaries and PSAP boundaries.

The county level GIS authority shall be required to provide a single updated countywide address point layer and a single updated countywide road centerline layer to the Arkansas GIS Office (AGISO) based on the below schedule. The county level GIS authority may provide this data to the AGISO as frequently as needed based on their discretion. This guideline establishes the minimum upload schedule based on the County Population Classification outlined in A.C.A. § 14-14-1204.

Classification	Population	Minimum Upload Schedule
Class 1	0 to 9,999	Semi-Annual
Class 2	10,000 to 19,999	Quarterly
Class 3	20,000 to 29,999	Quarterly
Class 4	30,000 to 49,999	Quarterly
Class 5	50,000 to 69,999	Quarterly
Class 6	70,000 to 199,999	Monthly
Class 7	200,000 and above	Semi-Monthly

Any emergency service boundaries (ESN), or PSAP boundary change shall be provided to the AGISO when a jurisdiction is ready for that change to take effect within the ESInet.

If no address points, road centerlines, emergency service boundaries or PSAP boundaries changed for each period on the schedule, a “No Change” statement shall be submitted to the Arkansas 911 Board.
